

Building the Ultimate HR System with MCP & AI Agents

A Comprehensive Analysis of Technology
Stack, Feasibility, and ROI

93%

Cost Reduction

vs Traditional Development

Modern HR Architecture Delivers Unified Talent Management

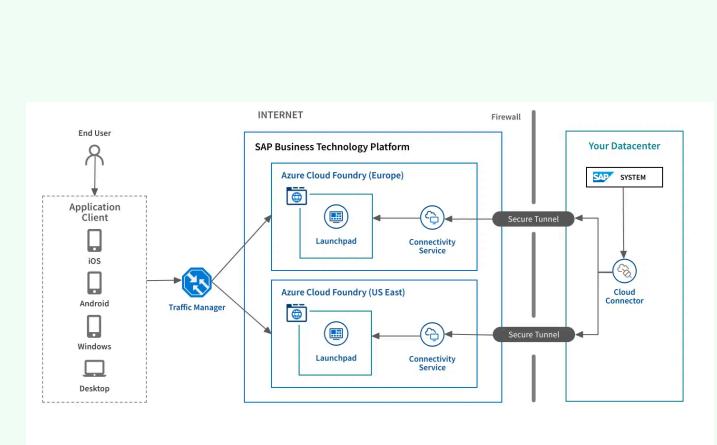

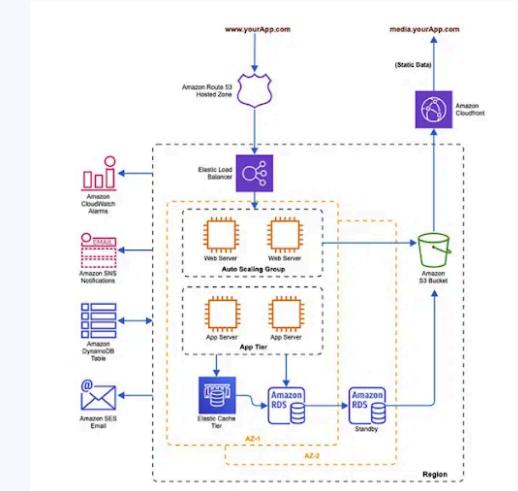

Traditional monolithic HR systems cannot keep pace with modern workforce demands. A **composable architecture** using MCP and AI agents enables organizations to integrate best-of-breed solutions while maintaining unified data and workflows.

80%

Reduction in Integration Complexity
vs Traditional Point-to-Point Integrations

Architecture Layers

- Frontend Layer**
Refine.dev React App
- MCP Orchestration**
MetaMCP/MCPX Gateway
- AI Agent Swarm**
5 Specialized Agents
- Backend Services**
Supabase + Browserbase
- External Integrations**
Job Boards, Payroll, LMS
- Data & Analytics**
BI, ML Models, Reporting

Optimal Technology Stack Combines Proven Platforms

Supabase

PostgreSQL database, authentication, real-time subscriptions, storage, SOC2/HIPAA compliance

\$25/mo Pro tier

Refine.dev

React framework for CRUD apps, pre-built components, headless architecture, native Supabase support

Free & Open Source

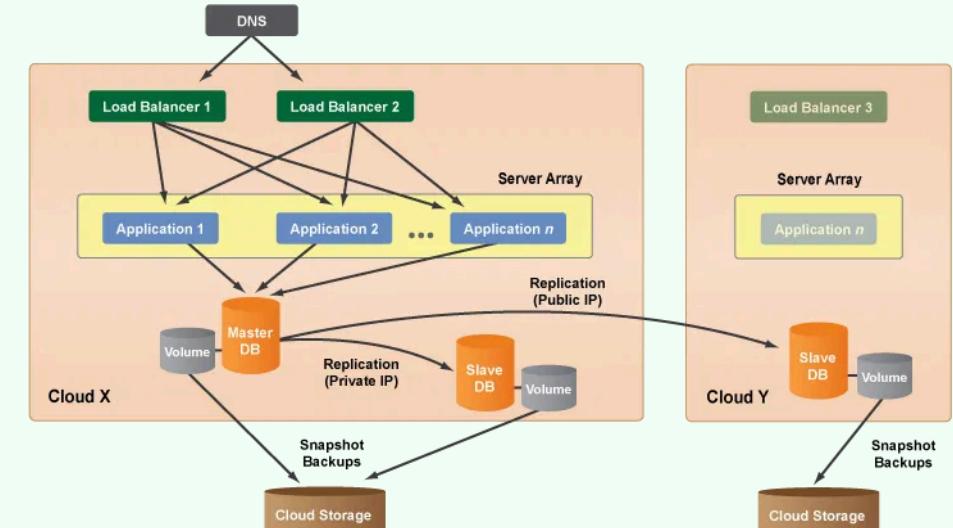

MetaMCP/MCPX

Unified MCP gateway, 75,400+ star ecosystem, access controls, usage tracking, load balancing

Free (MetaMCP)

Key MCP Connectors

- Supabase MCP (Database)
- Gmail MCP (Email)
- Puppeteer MCP (Browser)
- Slack MCP (Communications)
- Google Drive MCP (Storage)
- HR Partner MCP (HR Ops)

Cost Tiers

Tier	Monthly Cost	Use Case
MVP	\$0-50	Free tiers, validation
Production	\$100-200	Small-mid size orgs
Enterprise	\$500-2000	Large scale, compliance

Deployment: Vercel (Free tier for MVP, \$20/mo Pro for production) with global CDN and automatic scaling

Implementation Feasibility Shows 85-95% Success Rate

Modern AI platforms can successfully implement the HR system with minimal human intervention, reducing development time by **75%** and costs by **93%** compared to traditional approaches.

85-95%

Manus AI

Full execution environment with automatic error recovery. **118 hours total** (75 hours AI + 43 hours human review). Token cost: ~\$5.

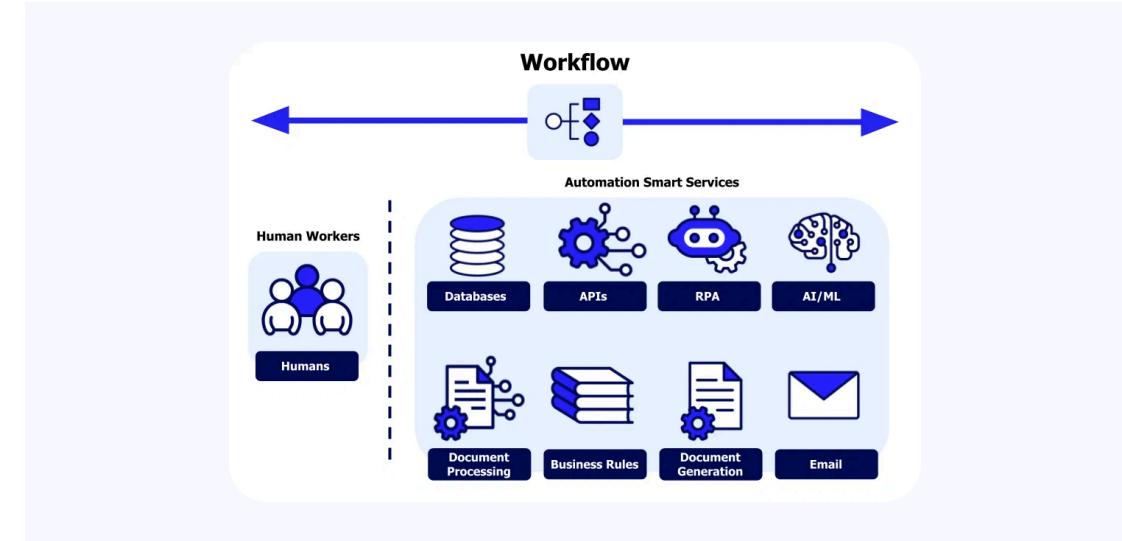

75-85%

Refine.dev + AI

Well-documented framework with clear CRUD patterns. Standard components have 95% success rate. Requires human refinement for complex logic.

Key Success Factors

- Clear instruction sets
- Iterative development cycles
- Standard technologies
- Human review at checkpoints
- Incremental deployment

Human Intervention Points

5-10%	Requirements Clarification Ambiguous specifications, edge cases	10-15%	Design Decisions UI/UX choices, architecture patterns
10-20%	Error Resolution Unexpected API errors, integration failures	20-30%	Quality Assurance Security review, performance testing

Recommended: Autonomous execution for 70-80% of tasks, human-in-the-loop for 20-30% requiring judgment, human approval for 100% of production deployments.

Cost & Time Savings: 93% Reduction, 75% Faster

Traditional Development

\$83,000

4-6 months • 1000 hours

High Risk

AI-Driven with Manus AI

\$6,105

2-4 weeks • 118 hours

Medium Risk

Total Savings

\$76,895

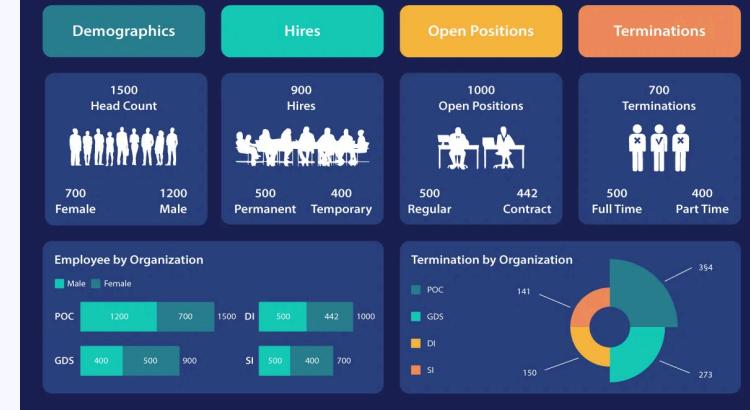

93% cost reduction

75% time savings

Phase-by-Phase Breakdown

Phase	Manus Time	Human Review	Total	Token Cost
Database Schema	2h	1h	3h	\$0.24
Authentication	3h	2h	5h	\$0.15
ATS Module	8h	4h	12h	\$0.40
VMS Module	6h	3h	9h	\$0.30
HRIS Module	10h	5h	15h	\$0.50
MCP Integration	4h	2h	6h	\$0.10
AI Agents	8h	4h	12h	\$0.36
Testing & QA	12h	8h	20h	\$1.49
TOTAL	75h	43h	118h	\$5.05

Executive Summary
